

WHAT IS CLAIMED IS:

1. A shield connection structure comprising:  
a conductive shield member including  
a plate member having a hole in which a shielded wire is inserted,  
a connection portion for connecting to a shielding portion of the shielded wire, and  
a reinforcing rib formed on a peripheral edge portion of said shield member;  
wherein said shield member is fixed to a casing for grounding.
2. A shield connection structure according to claim 1, wherein said connection portion has a tubular shape, and is formed on and projects perpendicularly from an end portion of said hole for passing said shielded wire therethrough.
3. A shield connection structure according to claim 1, wherein said reinforcing rib is formed in a continuous manner on the peripheral edge portion of said shield member over an entire periphery thereof.
4. A shield connection structure according to claim 1, wherein said reinforcing rib is integrally formed with said shielding member.

5. A shield connection structure according to claim 1, wherein said shielding member and said reinforcing rib are constituted by one and the same component.

6. A shield member fixed to a casing for grounding comprising:

a plate member having a hole;

a connection portion having a tubular shape provided around the hole for supporting and connecting to a shielding portion of a shielded wire; and

a reinforcing rib integrally formed on a peripheral edge portion of said shield member.
